DETAILED ACTION

Priority

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Information Disclosure Statement

2. The IDS, filed 4/1/03, has been considered in full.

Drawings

3. The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the "mutually abutting push links" (claim 22) must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 112

4. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Art Unit: 3682

5. Claims 14-33 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

It is not clear what Applicant is referring to as "rotation symmetrical".

In claim 14, the first and second friction surfaces are on the cones. The specification states that the improvement is that the cones can be fixed radially.

The claim states that the first and second friction surfaces can include a radial component. This is not clear to the Examiner. The same issue arises in claim 29, although the wording is different. Please resolve.

Claim 22 recites "mutually abutting push links". This is not shown in the drawings and, as such, the Examiner is uncertain what this limitation refers to.

Claim Rejections - 35 USC § 102

6. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 7. Claims 14-16, and 19-22, 24-31, as best understood, are rejected under 35 U.S.C. 102(b) as being anticipated by DE 812618.

The German Patent shows (Figure 4) two conical shaped friction members [c] sharing the same rotation axis (a, b); between the conical members is an idler comprising two independent hard (steel cross-section shown) friction belts (d, d) which

Application/Control Number: 10/088,126

Art Unit: 3682

engage the conical members; the idler capable of being moved in a radial direction (which also includes an axial component).

Claim Rejections - 35 USC § 103

- 8. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 9. Claim 23 is rejected under 35 U.S.C. 103(a) as being unpatentable over DE 812618 in view of US Patent to Bell (5,538,484).

DE 812618 shows the claimed invention except for the use of a flexible belt.

Bell teaches the use of a resilient flexible belt to increase the frictional engagement.

It would have been obvious to one having ordinary skill in the art at the time the invention was made to replace the hard material of DE 812618 with the friction enhancing material of Bell to increase the friction coefficient.

Allowable Subject Matter

10. Claims 17-18 would be allowable if rewritten to overcome the rejection(s) under 35 U.S.C. 112, second paragraph, set forth in this Office action and to include all of the limitations of the base claim and any intervening claims.

Application/Control Number: 10/088,126

Page 5

Art Unit: 3682

11. The following is a statement of reasons for the indication of allowable subject matter: The Fritsch Patent (5,551,929) shows (Figures 5 and 6) the conical friction surfaces being different; but there would be no reason to combine this reference since Fritsch uses this arrangement for a very specific reason (shape of 5'; and 8", 9"). The other art of record shows identical conical (friction) surfaces since there is no reason to make them different.

- 12. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Fritsch (5,551,929) discussed above. Tippmann (4,011,765) shows two conical friction surfaces with a ball as an idler. Mason et al. (2003/0119624; Schneider et al. (5,961,417); Rabinow (5,520,592); Helling et al. (4,530,257); and Lemmens (3,802,295) show friction transmissions of interest.
- 13. The following are suggested formats for either a Certificate of Mailing or Certificate of Transmission under 37 CFR 1.8(a). The certification may be included with all correspondence concerning this application or proceeding to establish a date of mailing or transmission under 37 CFR 1.8(a). Proper use of this procedure will result in such communication being considered as timely if the established date is within the required period for reply. The Certificate should be signed by the individual actually depositing or transmitting the correspondence or by an individual who, upon information and belief, expects the correspondence to be mailed or transmitted in the normal course of business by another no later than the date indicated.

Certificate of Mailing

I hereby certify that this correspondence is being deposited with the United States Postal Service with sufficient postage as first class mail in an envelope addressed to:

Commissioner for Patents P.O. Box 1450 Alexandria, VA 22313-1450

Art	Unit: 3682
	on (Date)
	Typed or printed name of person signing this certificate:
	Signature:
	Certificate of Transmission
	I hereby certify that this correspondence is being facsimile transmitted to the United States Patent and Trademark Office, Fax No. (703) on (Date)
	Typed or printed name of person signing this certificate:

Application/Control Number: 10/088,126

Please refer to 37 CFR 1.6(d) and 1.8(a)(2) for filing limitations concerning facsimile transmissions and mailing, respectively.

Signature:

Any inquiry concerning this communication or earlier communications from the examiner should be directed to David M. Fenstermacher whose telephone number is 703-305-7438. The examiner can normally be reached on 9:30-6:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, David Bucci can be reached on 703-308-3668. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
